

## Abreast of technology...

65km of DMV seamless stainless steel tubing is helping to expand the horizon of man's scientific knowledge.

The tubing was selected to form part of the superconducting magnets of CERN's large Hadron Collider in its attempt to delve further into man's understanding of the structure of matter and recreate the conditions prevailing in the early universe.

This search for greater knowledge reflects DMV's own philosophy of constantly seeking to produce new materials with which to meet complex customer demands.

***DMV Stainless - setting today's industry benchmarks***
